Certificate of Advanced Studies in Personalized Molecular Oncology

CONTINUING EDUCATION

Certificate of Advanced Studies (CAS) in Personalized Molecular Oncology

Overview

Cutting-edge technologies, like next-generation-sequencing (NGS), combined with the development of targeted therapies are now revolutionizing clinical practice, thereby bringing new complexity to the field of oncology. The Certificate of Advanced Studies (CAS) in Personalized Molecular Oncology aims providing at а comprehensive and integrative view of the field, by covering all the aspects involved along the pipeline: (i) tumor biology and genetics, (ii) molecular pathology, (iii) clinical bioinformatics, and (iv) clinical oncology.

First of its kind in Switzerland, it will focus on the methodologies used to generate, analyze and interpret patients' molecular profiles, also touching upon the associated technical, regulatory and ethical challenges. As an important outcome, it establishes a common language between the wide range involved professionals of in the personalized oncology process. from biologists, bioinformaticians, pathologists to clinicians, enabling an efficient and betterinformed use of e.g. genomic data for both routine clinical practice and clinical Moreover, research. it empowers professionals to develop a vision in their own institution, by critically evaluating the potential benefits and limitations of current and future developments in personalized oncology.

The CAS is organized jointly by the University Hospital of Basel, the University Hospital of Lausanne, and the SIB Swiss Institute of Bioinformatics.

chore reisonalized molecular oncology 10 Leto Duration: approx. 10 months		
	Module title	Module coordination
Module 1	Tumor biology and genetics	CHUV Cancer Genetic
Module 2	Molecular pathology	USB Pathology
Module 3	Clinical bioinformatics	SIB Clinical Bioinformatics
Module 4	Clinical oncology	USB Oncology
Mini-thesis	Planned in small groups	Program Board

CAS Personalized Molecular Oncology | 10 ECTS | Duration: approx. 10 months

Target audience

CAS multidisciplinary The targets a audience of professionals involved in personalized molecular oncology, including laboratory managers, biologists, bioinformaticians. pathologists, geneticists, clinicians and pharmaceutical company employees. **Applicants** are selected on the basis of their CV and demonstrated interest and experience in personalized oncology, and are expected to hold a university degree (MSc or MD).

Needs

Medical practice is undergoing a revolution around personalized medicine, driven by the development of high throughput technologies. These technologies produce huge quantities of data, providing an unprecedented level of molecular information, but also raising new challenges for clinicians and clinical laboratory professionals.

oncology hemato-oncology, In and genomic profiles are now increasingly being used, notably for clinicians to prescribe the right drug for the right patient. The process to generate, analyze and interpret genomic data is however complex and calls upon a plurality of skills. There is therefore a need for continuing education this in rapidly evolving field, to ensure that professionals various backgrounds can with communicate and collaborate efficiently to personalized optimize the oncology process, for the benefit of patient care.

In Switzerland, existing continuing education for MDs and clinical laboratory professionals do not cover the multidisciplinary needs for personalized molecular oncology. Thus, we also ask credits to Swiss professional societies, to encourage MDs and clinical biologists to attend the CAS as part of their FMH / FAMH continuing education (SSMO, SPath, SRO, SSMG).

Existing bioinformatics curricula also lack the clinical emphasis on diagnosis and do not offer students the possibility to understand the experimental and clinical constrains of the medical realm.

The CAS in Personalized Molecular Oncology is unique in Switzerland, addressing currently unmet needs and bringing together a multidisciplinary audience.

Partners

The CAS is hosted by the Faculty of Medicine of the University of Basel.

It is organized jointly by (i) the University Hospital of Basel, which is the Swiss hospital sequencing the largest number of samples in oncology, (ii) the University Hospital of Lausanne, a major oncohematology sequencing center in Switzerland, and (iii) the SIB Swiss **Bioinformatics**. Institute of an internationally recognized leader in bioinformatics.

Course program

The whole CAS consists of four modules.

Tumor biology and genetics

Module content

- 1. Basic cytogenetics and molecular genetics
- 2. Hereditary vs. acquired genetics
- 3. Genetic recombination, DNA damage and repair
- 4. Solid tumors and hematological malignancies
- 5. Genetic predisposition to cancer
- 6. Diagnostic genetic testing
- 7. Tumor cell proliferation
- 8. Clonal evolution & tumor heterogeneity

Learning objectives for participants

- Describe the mechanisms yielding to genetic variation, and be familiar with the various types of genetic variants.
- Distinguish hereditary genetic anomalies from acquired genetic anomalies.
- Discuss the advantages and limitations of different genetic laboratory methodologies for diagnostic testing.
- Demonstrate how to interpret nonhotspot mutations using public databases and taking into account overall genomic aberrations and clonal evolution.
- Be aware of ethical implications of incidental genetic findings.

Molecular pathology

Module content

- 1. Sample classification and preparation
- 2. Principles of nucleic acids extraction
- 3. Sequencing platforms and setup
- 4. Understanding gene panels
- 5. Internal / external Quality controls
- 6. Laboratory accreditation
- 7. Reporting genomic variants
- 8. Interpreting a molecular profile

Learning objectives for participants

- Understand the basics (procedures and rules) of an accredited clinical laboratory.
- Gain knowledge about the different types of specimens (e.g. tissue biopsy, cytology, resections).
- Get familiar with all the steps that lead from samples collection to final molecular report generation along with all possible bottlenecks.
- Have an overview about the currently used technological platforms in molecular diagnostics (comparison with the research setting).
- Get familiar with the most common clinically relevant variants along with their interpretation and classification system.

Clinical bioinformatics

Module content

- 1. Data pre-processing
- 2. Read mapping
- 3. Variant calling
- 4. Quality control
- 5. Variant annotation
- 6. Hardware, security, privacy
- 7. Artificial intelligence (AI) basics
- 8. AI current and future applications

Learning objectives for participants

- Communicate efficiently with bioinformaticians.
- Describe a bioinformatics analysis pipeline to call mutations from NGS data.
- Perform quality control at the run, read and variant levels.
- Use off-the-shelf bioinformatics tools to annotate and support the interpretation of variants.
- Consider hardware, security and privacy issues when managing omics data.
- Understand how artificial intelligence contributes to and will further impact personalized oncology.

Clinical oncology

Module content

- 1. Tumor Physiology
- 2. Tumor Immunology
- 3. Cancer Statistics and Epidemiology
- 4. Prognostic and Predictive Markers
- 5. Targeted Therapies in Clinical Oncology
- 6. Risks / probabilities for the interpretation of genetic results and counseling
- 7. Clinical Trials in Molecular Oncology
- 8. Molecular Tumor Board

Learning objectives for participants

- Describe main intracellular signaling pathways in solid tumors and molecular aberrations hampering this signaling.
- Get detailed knowledge of immunological mechanisms and how these may be used to optimize therapeutic approaches.
- Get a basic understanding of the principles underlying the design and analysis of clinical trials in oncology.
- Understand the importance of predictive markers in molecular oncology.
- Get familiar with the most frequent molecular aberrations in solid tumors and routinely used targeted therapies.
- Learn about genetic counseling and its implications for patients and families.

Program structure

The program consists of 4 modules of 4 days each. Each module is interactive, with lectures alternating with hands-on sessions, group discussions, on-site lab visits, in addition to home assignments.

Acquired competencies are evaluated with an exam at the end of each module. In addition, students complete a mini-thesis on a study case in small multi-disciplinary groups. Altogether, completion of the program is awarded 10 ECTS. Previous experience may also be recognized.

Participants attending only one module receive a short course certificate with 2 ECTS, provided they pass the exam of the module.

Quality assurance

Quality is assured on the student's side with an anonymous online questionnaire of about 20 questions, covering content, organization, teaching & interaction, relevance and satisfaction. This questionnaire is sent after the end of each module. Participants are also asked if they agree to answer a long-term feedback form, to assess the impact of the program on their career.

An online questionnaire is also sent to teachers after their respective module, covering organization, level and participation of the students. The results of the questionnaires are communicated to the module coordinators and discussed with the Program Board before the start of every new session, thereby ensuring that content and format can be adjusted in due time as needed.

Course fee

Fee for attending the whole CAS: CHF 6'000 Fee for attending a single module: CHF 2'000 These fees include course materials, lab visits, and exams.

Program Board

Tumor biology and genetics

Prof. Dr. Jacqueline Schoumans Pouw

FAMH specialist in medical genetics Director of the Oncogenomics Laboratory Clinical Hematology Service/ Laboratory Department University Hospital Lausanne

Molecular pathology

Dr. Salvatore Piscuoglio

Research group leader, Co-Director of Research Institute of Medical Genetics and Pathology Research group leader, Department of Biomedicine University of Basel

Prof. Dr. Christian Ruiz

CSO of Moonlight AI Titular professor of the Medical Faculty University of Basel

PD Dr. Matthias Matter

Head of Molecular Pathology Unit Institute of Medical Genetics and Pathology University Hospital Basel

Clinical bioinformatics

Dr. Aitana Neves

Team Lead Data Science Clinical Bioinformatics SIB Swiss Institute of Bioinformatics

Miriam Tesfai

CAS Program Coordinator Senior Administrative Assistant Clinical Bioinformatics SIB Swiss Institute of Bioinformatics

Clinical oncology

Prof. Dr. Dr. Andreas Wicki Vice Chairman, Department for Medical Oncology and Hematology (MOH) Director, Comprehensive Cancer Center Zurich (C3Z), Clinical Program University Hospital Zurich

Prof. Dr. Dr. Sacha Rothschild

CAS Director of Studies Director Oncology / Haematology Cantonal Hospital Baden

PD Dr. Dr. Benjamin Kasenda

Specialist in Medical Oncology (FMH) Specialist in Internal Medicine and Haematology and Oncology (D) Senior physician, Medical Oncology University Hospital Basel

Dates & Venue

Each session of the CAS begins in the fall and lasts approximately 10 months. Each module consists of 4 days of presential teaching, over two Friday-Saturday sessions. Exact dates are communicated on the website in March for the following year.

Modules take place in Lausanne (modules 1, 3) and Basel (modules 2, 4).

Registrations open in February.
